

USE OF ARTIFICIAL INTELLIGENCE IN UCAS PROCESS

When students complete their UCAS university applications they must now declare that their personal statement is their own work and hasn't been copied or provided from another source, including artificial intelligence software such as ChatGPT. The UCAS Verification Team run checks to detect fraudulent applications and patterns of similarity in personal statements. If their software identifies this, they will inform the universities a student has applied to. If a student wants to risk their application being voided by the university, we cannot obviously stop them but The Willink cannot accept any responsibility for this.

We strongly recommend that a student submits only their own original work in their application, and we have an excellent record of supporting students with successful applications. The best personal statements are exactly that; personal. They should describe a student's ambitions, skills and the experiences that make them suitable for the course they are applying for in their own words.

Our dedicated UCAS Coordinator, Mrs Matcham, is available to have one-to-one meetings with each student to help them with their personal statement and there are further guides on the UCAS website. If you have any questions, please contact: jmatcham@willink.wberks.sch.uk.

[A guide to using AI and ChatGPT with your personal statement](#)

If you're not already using ChatGPT or other AI tools, you've probably heard about them. But should they be used to help with your UCAS personal statements? Is it cheating? Or can they be helpful in crafting your personal statement?
